LoRaWAN® in Logistics

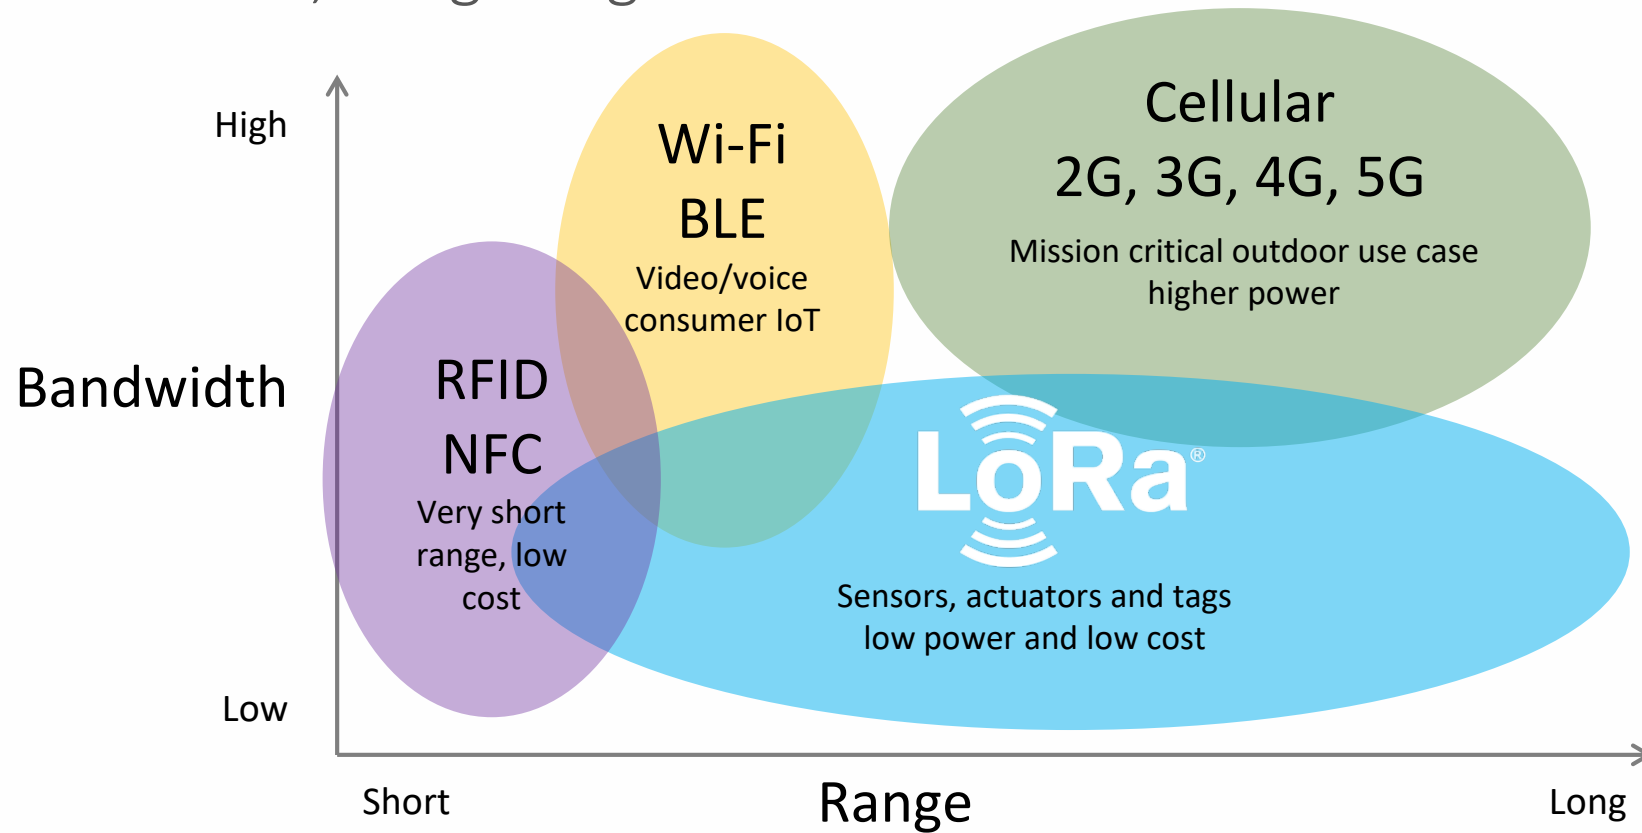

Asset Tracking with Minimal Infrastructure

Roelof Koopmans

Senior Director, Semtech Corporation

LoRa[®] Fills a Technology Gap in Wireless

Low Bandwidth, Long Range

LoRa[®] Key Benefits

Long Range

- Up to 15-30 miles outdoor
- Deep indoor coverage

Low Power

- Up to 10+ year lifetime
- >10x vs. Cellular M2M

Multi-Usage

- Scalable capacity
- Public or private LoRaWAN[®] network

Cost Effective

- Minimal infrastructure due to large range and affordable gateways

LoRa[®] Communication Features

Bidirectional

- Broadcast and acknowledge
- Firmware Updates Over The Air (FUOTA)

LoRaWAN[®]

- Global standard kept by LoRa Alliance[®]
- Seamless interoperability between devices, gateways and networks

Security

- End-to-end AES-128 encryption on network and application level

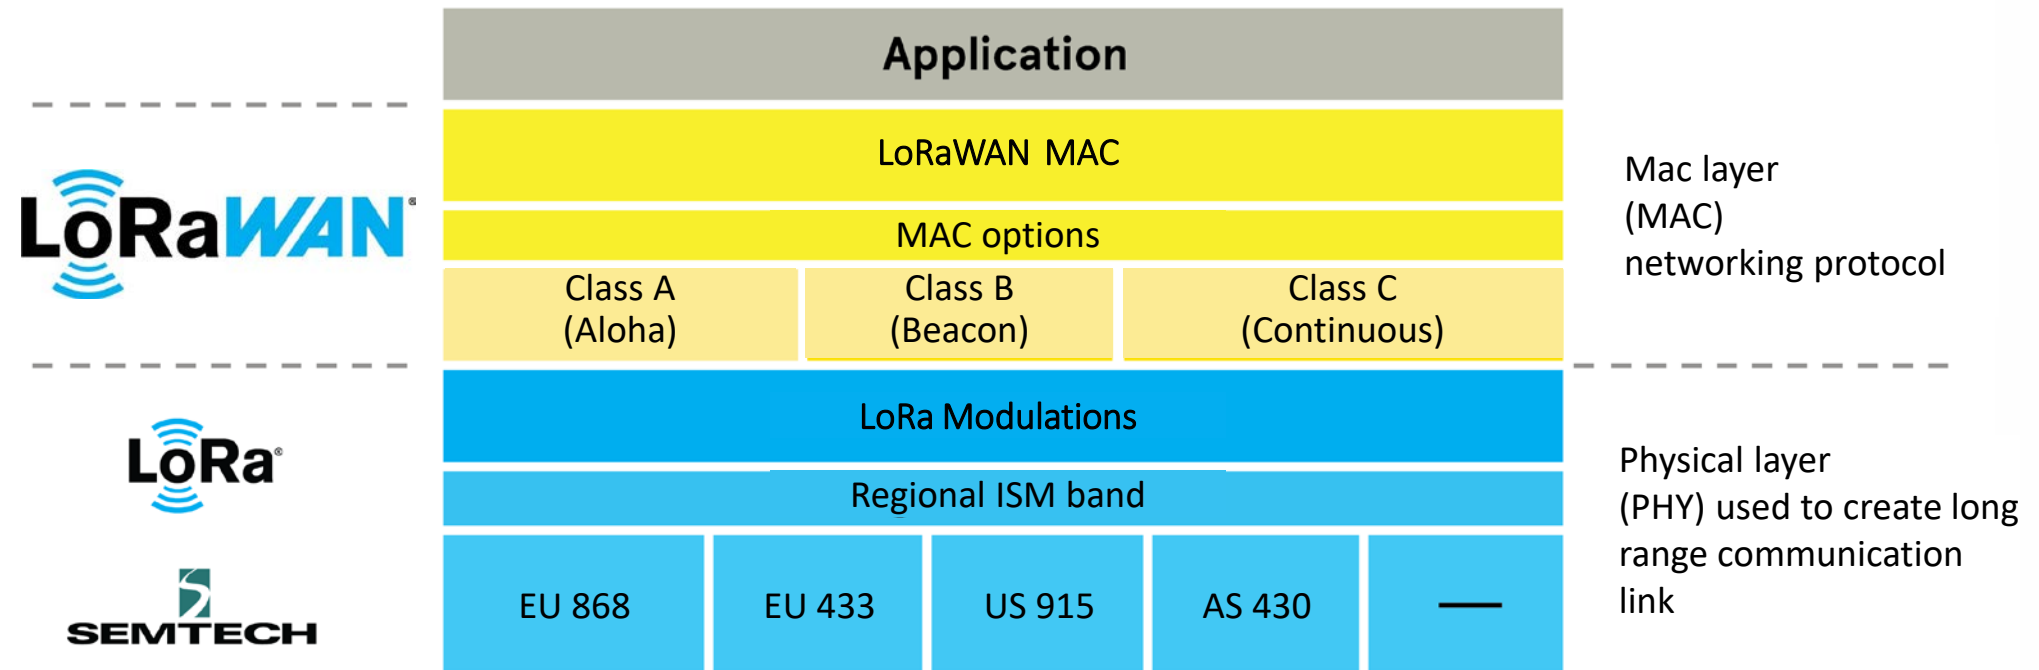

Geolocation

- Indoor and outdoor location when combining LoRa with GNSS, Wi-Fi and BLE scanning

LoRa Alliance® 2015 - 2020

Hundreds of Member Companies

Including leading players:

- Orange
- British Telecom
- Google
- Amazon
- Tencent
- Alibaba

LoRaWAN[®] Networks: Private or Public?

- Nationwide public networks enable simple customer utilization
 - For example: Netherlands, Switzerland, France, Belgium, South Korea
- Companies can deploy private LoRaWAN networks similar to Wi-Fi
 - When no (national) network is available or needed
 - No recurring costs to the operator
 - Offers security advantages
- LoRaWAN Network Server through Cloud-based providers or open source
 - For example: The Things Industries, Actility, Everynet, Loriot

Asset Tracking Use Cases

European car manufacturer tracking high-value assets*

- Car OEM with around 30 factories and 400,000 trackers per year
- Losing 5-15% of assets which need to be replaced each year
- Private LoRaWAN® network at 30 sites including Tier-1 suppliers
- **Benefit:** Capex reduction - fewer assets needed for same number of loops; fewer replacement costs (5% of 400,000 racks costs ~10M€/year)

LAUAK** (French aircraft parts manufacturer) tracking work order assets throughout facility

- 14,000 transport boxes based on LoRa® deployed
- Indoor geo-fencing and crate identification by LED
- LoRa replaced a RFID system, further reducing manual intervention and human error
- **Benefit:** Reduction of 20% for production lead times, and 10% in production line down-times

Manheim*** Car Auctioning

- Finding individual cars at large parking lots: 100,000+ cars across 80+ location
- Private LoRaWAN network with outdoor GPS-LoRa trackers

LoRa Edge™ and LoRa Cloud™

LoRa Edge

- New chip-set combining three radio transceivers on one IC:
 - LoRa®
 - GNSS (GPS, Beidou) scanning
 - Wi-Fi scanning
- Chip-to-Cloud by design allowing customer to achieve the best balance among features, performance and power consumption

LoRa Cloud

- Higher geolocation accuracy due to algorithms
- Lower costs of provisioning sensors at scale
- Higher security due to security keys from Cloud
- Lower power consumption due to optimized design (up to one tenth that of GPS)
- Less coding and integration effort/cost required by customers, solution providers or systems integrators

LoRa Edge™ Geolocation Solution

Industry-first Low Power, Highly Integrated Multi-technology Geolocation Solution

Key Takeaways

1. LoRaWAN®: de-facto wireless connectivity for battery powered IoT devices
2. Battery lifetime is key driver for ROI of IoT projects (can last 10+ years)
3. Geolocation (in/outdoor) by combining LoRa® with Wi-Fi and GNSS scan
4. Global open standard (LoRaWAN) for seamless connectivity
5. Devices based on LoRa deploy via public or private networks
6. LoRa Edge™ and LoRa Cloud™ deliver affordable geolocation
7. Identification by RFID and outdoor geolocation by LoRa: **best of both worlds!**
