Today's Presenters

Dean Frew

Chief Technology Officer and Sr. VP RFID Solutions SML Group

Dean Frew, Chief Technology Officer and Sr. VP for RFID Solutions, SML Group, and Founder of SML Intelligent Inventory Solutions (formerly Xterprise, purchased by SML in 2013). Mr. Frew is responsible for driving SML's RFID Tags and Solutions strategy, based on his 20+ years of experience delivering RFID solutions to retailers and brand owners around the globe.

Listening to this Webcast

The audio portion of this webcast is broadcast over the Internet.

- Make sure your computer/device's audio is available, unmuted and the volume is turned up to an acceptable level.
- If you are having trouble with receiving the audio, please select the “?” in the upper corner of the Webinar interface and select “Test My System Now.” This will give you information on your connection and how to remedy any problems you may have.
- Often just simply disconnecting and rejoining the event will allow you to catch a better stream of the audio if you are experiencing audio problems.

How to Ask a Question

It's easy to submit your questions for our presenters during the event.

- On the left side of your screen there is a box labeled “Ask a Question” where you can enter your questions.
- Questions related to the webcast topic will be held and answered during the Q&A session at the end of the event.
- Questions related to technical issues can also be entered in this box, and they will be answered immediately by our webcast producers.

Presentations

- You can review this presentation and previous virtual events and webinars by going to our video library:
rfidjournal.com/rfid-journal-videos/
- You will need to be a registered user of rfidjournal.com (it's free)

Why Item-Level RFID is the Key to BOPIS 2.0

SPONSORED BY

SML

| RFID

SML RFID ... Basis for case studies

- Produced **over 2billion encoded Inspire™ RFID tags** for retail in 2019 ... growth in 2020
- **Over 24 RFID tag encoding service bureaus** around the globe ... close to garment factories, faster cycle times
- **~4,000 stores are live** for top global brands, in 18 countries, using the Clarity® software suite for item-level RFID enhanced Inventory and Retail Operations Management... **3,000 more stores under contract for deployment**, range from 100 to 5,000 store chains
- **Wide spectrum of retailers** ... Apparel, Footwear, Home Goods, Sporting Goods, Cosmetics & Electronics
- **Over 200,000,000 unique RFID tags** are read in stock counts in retailers around the globe every week ... Improving their **inventory accuracy to ~98%**
- Clarity® has assisted in **>80,000 store stock counts**, **1,000's of BOPIS** orders since stores reopened
- **ROI's in first 12 months**, Tags, SW, Services, Hardware, Support

Retailers are experiencing issues with BOPIS today

- **Efficient BOPIS/BOSFS** depends on high inventory accuracy
- **BOPIS 1.0** (being used today) is SKU based
- SKU based inventory accuracy is **<70% accurate**
- **BOPIS 1.0** is wrought with **extra labor costs, high % order cancel rates, missed sales** due to unknown items in stores
- Retailers are rolling out **Item-Level RFID based inventory accuracy is >98%** ... enabling BOPIS 2.0
- **BOPIS 2.0 is operational today** and will be the future of Omnichannel for Apparel, Footwear, Home Goods, Sporting Goods and Fragrance/Cosmetics

Actual Inventory situation in retail today....

This is what a retailer **THINKS** stock on hand looks like....

Findings from
every Item-
Level RFID Pilot

This is what stock on hand **ACTUALLY** looks like.... <70% Item-Level Accuracy

Breaking down the problem

ERP Understatement (Averages >12%)

- Have more units than you think,
- perpetual overstock,
- missed BOPIS opportunities

ERP Overstatement (Averages >15%)

- have fewer units than you think,
- perpetual shortages,
- results in canceling BOPIS orders

Frozen Inventory (Averages >8%)

- think you have units ... but none in stock,
- so never sell,
- so don't replenish
- so cancel BOPIS orders

... Can't run effective BOPIS with this situation

Retailer Case Studies: inaccuracy is across spectrum of size of retailers

- ERP Stock on Hand files are inaccurate and since this is used as basis for BOPIS order confirmation ... results in canceled and missed BOPIS orders
- “Big Data” and “Digital Transformation” investments are ineffective when inventory distortion is so far off
- Physical PI counts are being eliminated after RFID Implementations

Retailer Case Studies: How does this **inventory inaccuracy** gets created... fundamental to fix these for effective BOPIS

- Starting point (**annual PI**) inventory position **is off by >8%** at Item-Level
- Shipment and **receiving errors average +/- 2%** On every shipment
- Compounding **inventory distortion**

Retailer Case Studies: How it is being **solved with Item-Level RFID ...**
keep it simple for **BOPIS 2.0**

- Focus on **business case, proven tech** ... not technology experiments
- **Frequent RFID handheld stock counts >98%** accurate, self corrects
- **Better receiving** Rapid highly accurate “closed box” receiving >99.8% accurate, stock count self corrects
- Using **RFID enabled BOPIS/BOSFS picking**

Rollout Proven RFID Technology from SML is Solving these problems for retailers around the Globe

Through Item-Level RFID Rollout
Retailers can get back to this...

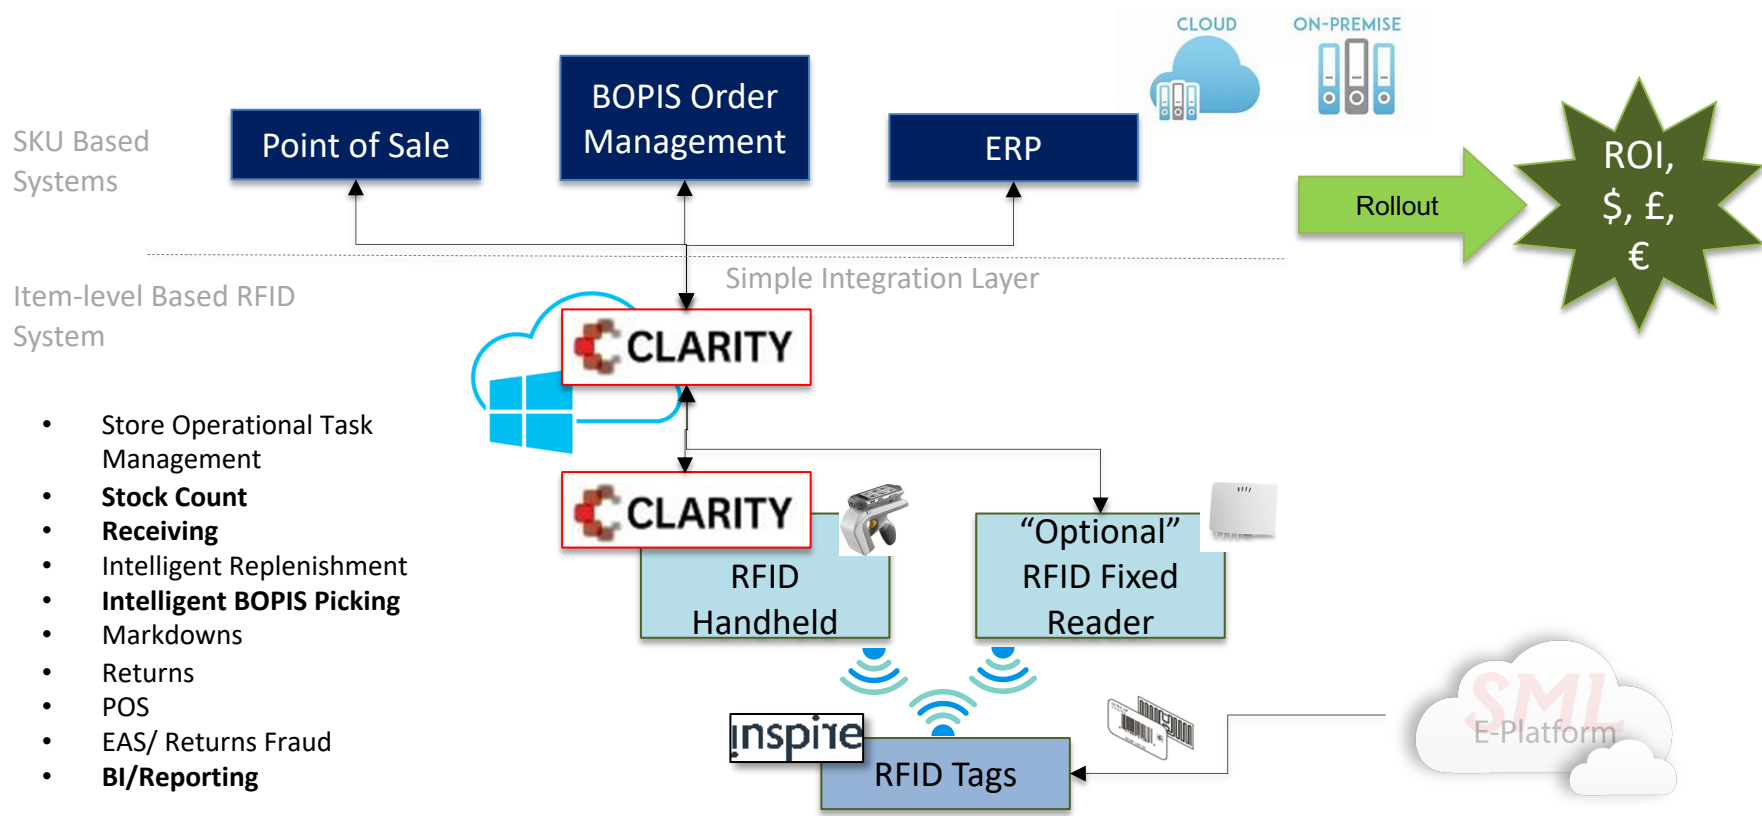

- “Pull” based replenishment
- Source tagged product
- Weekly handheld-based stock counts
- Daily receiving
- Enhanced/Confident BOPIS 2.0

Retailer case studies:

- Inventory accuracy >98%
- Improved sales floor & exposed availability... >95%
- Increased sales ..>3%
- Reduced BOPIS order cancelations ... >15%
- Improved labor efficiency... >20%
- Improved BOPIS customer satisfaction ... >30%

Scalable Item-Level RFID System Architecture from SML RFID

What do we see in 2021 for BOPIS 2.0

- Everyone of our Clarity® retail store customers are **moving to deeper integration with OMS** for BOPIS 2.0 improvements
- Retailers are moving **Item-Level RFID upstream** for additional BOPIS benefits
- Most retailers are looking at replacing existing BOPIS 1.0 handheld application with **Clarity® RFID enabled picking** application
- Most retailers are moving to **integrating all channels** and products to support “buy anywhere ... return anywhere”
- All new customers have **BOPIS 2.0 as fundamental** to business case ... with stock count and receiving
- Most retailers are investigating mobile “**scan and go**” technology

How to get started?

- Contact SML at info@sml-rfid.Com and our team can walk you through Item-Level RFID / BOPIS 2.0 journey:
 - Perform live/remote full function demonstration out of one of our Retail Ideation Space facilities in US, UK and China
 - Getting low cost / turn-key pilot up and running in weeks
 - Measure ERP true item-level inventory accuracy & impact
 - Development rollout business case
 - Begin source tagging
 - Integration, implementation and go-live

THANK YOU
