REP.

SEPTEMBER 26 - 28, 2021 PHOENIX CONVENTION CENTER | PHOENIX, AZ

RFD JOURNAL LIVE!

Unlock IoT Device Opportunities with Impinj E710, E510, E310 RAIN RFID Reader Chips

Presenter:

Nat Hillary

Sr. Solutions Engineer

New RAIN RFID Reader Chips Unlock New IoT Innovation

Set new benchmark for performance, integration, and ease of use

Up to 2x better* receive sensitivity

reliable performance for new and existing solutions

Up to 80% smaller* system designs ideal for small, next-generation IoT devices

50% lower* chip power consumption support battery-powered, energy-efficient devices

Easy-to-use development tools to accelerate innovation of next-gen IoT solutions

SEPTEMBER 26 - 28, 2021₃

Unlock New and Emerging Uses for IoT Devices

Ranging from high-performance fixed readers to wearables to smart appliances

Impinj E710 reader chip

Industry-leading receive sensitivity for long read range. Identify, locate, and authenticate large numbers of tagged items quickly. Ideal for handheld and fixed readers.

Impinj E510 reader chip

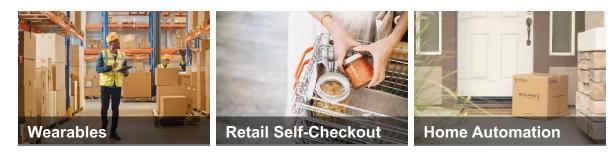

High-performance receive sensitivity for medium read range and groups of tagged items. Size-, power- and cost-optimized reader chips for mobile devices and embedded IoT use cases.

Impinj E310 reader chip

Good receive sensitivity for close read range and individual or small groups of tagged items. Proximal use cases including printing and HF alternative.

Security Systems

SEPTEMBER 26 - 28, 2021

Meet the Increasing Demand for Item Connectivity

Portfolio delivers a range of performances and costs, and worldwide region support

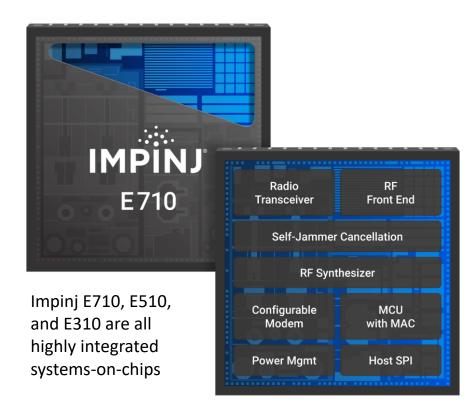

Achieve the speed, accuracy, and range your solution needs

- Impinj E710: superior performance, supports long-range monitoring of large populations of items
- Impinj E510: mid-range price and performance, optimized for battery-powered devices
- Impinj E310: lower cost, delivers performance, optimized for close-proximity devices

Industry-Leading System Integration

Enables small device form factors, lowers overall BOM cost, and simplifies design

High-performance RAIN RFID radio transceiver for long read range and improved read rate

for reliable performance and worldwide support

鼦

to optimize performance across wide range of use cases

High-performance modem with flexible reader modes

Integrated self-jammer cancellation and RF front end

Integrated MCU with RAIN RFID Gen2 protocol for efficient execution of tag commands and operations

High-speed, industry-standard SPI host interface to easily connect to a wide range of host controllers

SEPTEMBER 26 - 28, 2021

Impinj Reader Chips

A portfolio of systems-on-chips (SoCs) that set performance standards for more than a decade

Leverage 10+ years of technology and market leadership

Used by millions of devices, Impinj reader chips set the reader chip performance benchmark for more than a decade

Enhance next-gen IoT devices with RAIN RFID connectivity

Enable next-gen IoT devices to identify, locate, and authenticate everyday items, improving service and convenience

Design a broad range of powerful, energy-efficient RAIN readers Build a portfolio of devices from high-

performance fixed readers to batterypowered wearables, maximizing design reuse with software and pin compatibility

Accelerate innovation of IoT solutions with easy-to-use development tools Reach emerging markets quickly with

industry-leading system integration, easy-to-use hardware and software kits, and pre-certified partner-built modules

SEPTEMBER 26 - 28, 2021
