

MAY 17 - 19, 2022

MANDALAY BAY | LAS VEGAS, NV

RFID/IoT for Warehouse and Inventory Management

Targeting the Correct RFID/IoT Technology for the Right Project

Presenter: Samad Rostampour

Professor, Vanier College and IT director @ IoT Lab, Université du Québec à Montréal (UQAM)

With the **collaboration of Ygal Bendavid**

director @IoT Lab, Université du Québec à Montréal (UQAM)

Your Presenter

Samad Rostampour

- Professor @ Computer Science Department, Vanier College, Montreal
- IT Director, IoT lab., UQAM University, Montreal(<https://labiot.uqam.ca/>)
- Judge @RFID Journal Award

Today's Program

- 10:45 AM - 11:30 AM: RFID/IoT in Warehouse & Inventory Management Basics
- 11:30 AM - 12:15 PM : Linking RFID to Inventory-Management Best Practices
- 12:15 -13h00 PM : Lunch time
- **1:00 PM - 1:45 PM: Targeting the Correct RFID Technology for the Right Project**
- 1:45 PM - 2:30 PM : Key Steps in Building an Inventory-Management RFID Solution:
Build Your Own RFID Portal
- 2:30 -2h45 PM : Break time
- 2:45 PM - 3:30 PM: Designing Your RFID Solution
- 3:30 PM - 4:15 PM: Building Your RFID Business Case

Objective of the presentation

- **Define the RFID/IoT strategy & select the right project**
- Use a Methodological approach to solve problems & identify opportunities
- Target the appropriate RFID/IoT technology for your specific case

Main Idea of the presentation

But there is more than one way...

& more than one right solution for the right
RFID/IoT project...

MAY 17 - 19, 2022

& the right solution for the right RFID/IoT
project...

MAY 17 - 19, 2022

1-Define the RFID/IoT strategy

Vision & orientation

- How **effective** and **efficient** are the existing operations & business processes?
- What are the Strategic-Tactical-Operational **goals** of my warehouse/inventory project?
- How can RFID **help me** reach these goals?

“A vision without a plan is an hallucination”

Select the right RFID project

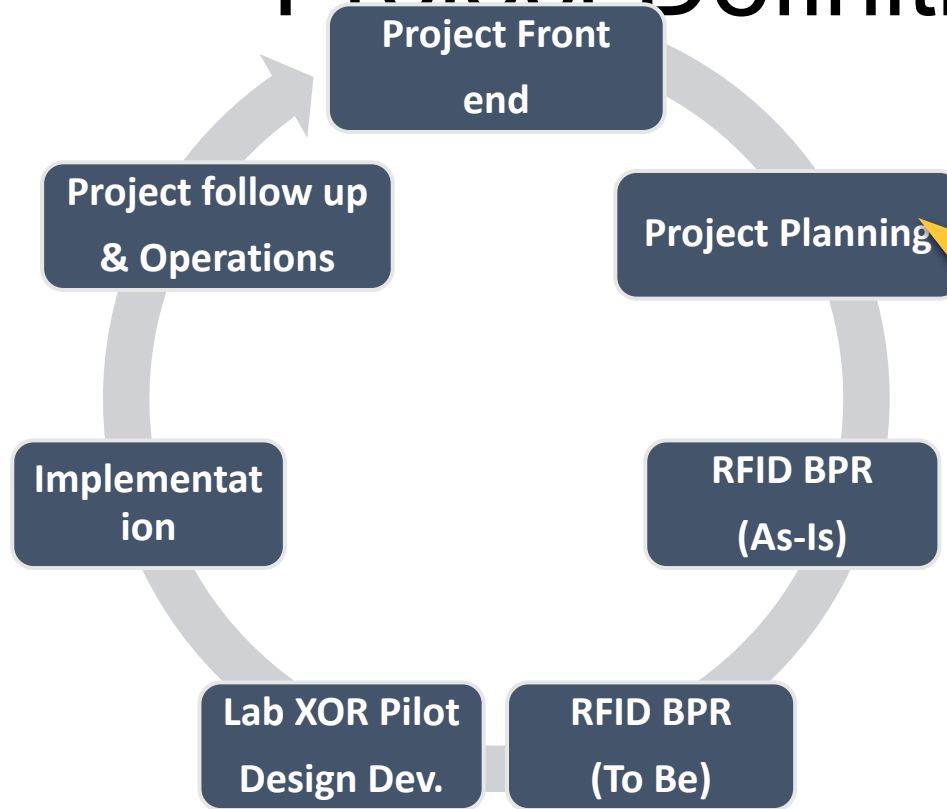

Project Portfolio Management

- Strategies
- Resource allocation (based on priorities)
- Financials Methods (yes but....)
- Bubble diagrams or portfolio maps
 - Classification XY, E.g. P(technical success) and benefits (NPV))
- Scoring Models
 - Selected criteria's
- Check-lists
 - Yes-No; Go-Kill points (Stage gate)

Project Definition and planning

RFID Project life cycle

- **Project Definition/requirements**
- Project initial planning & comm.
- High level Business case / value
- Project / Pilot site pre-selection
- Team building & Education

It all starts with requirement management

Poorly expressed requirement can be devastating; - domino effect that leads to time-consuming rework, inadequate deliveries and budget overruns

How Projects Really Work (version 1.0)

www.projectcartoon.com

How the customer explained it

How the project leader understood it

How the analyst designed it

How the programmer wrote it

How the business consultant described it

How the project was documented

What operations installed

How the customer was billed

How it was supported

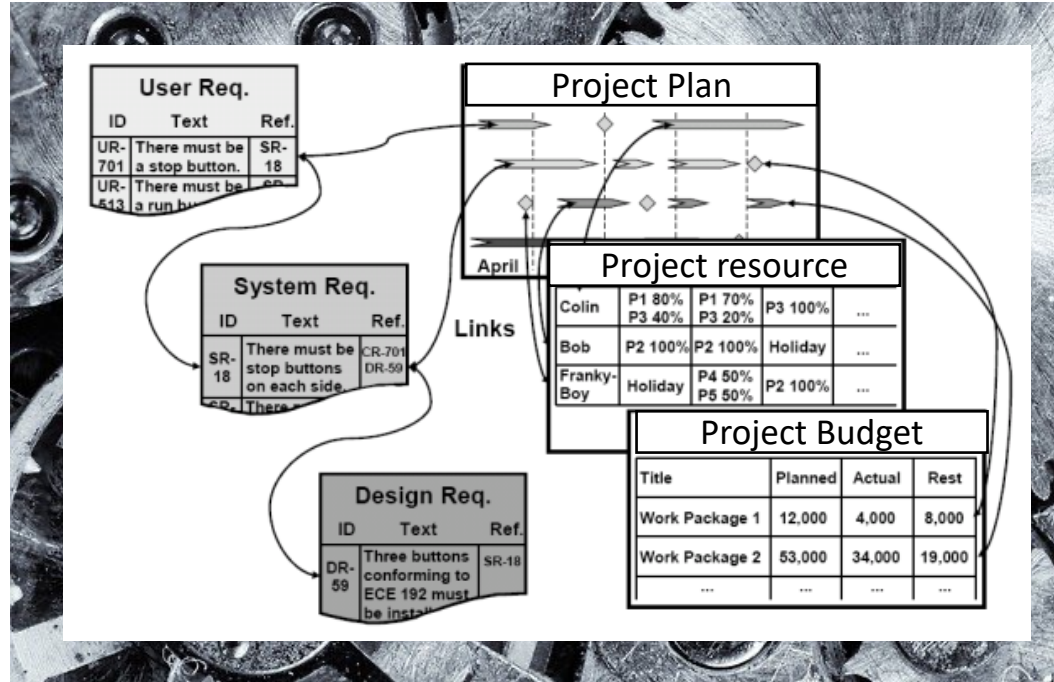

What the customer really needed

Moving from idea to projects

Supporting the writing of an RFID-IoT project proposal

“(...) link user requirements to system requirements and system requirements to design requirements (...) to work packages, to resources and budgets, to milestones and deliverables”...

Objective of the presentation

- Define the RFID/IoT strategy & select the right project
- **Use a Methodological approach to solve problems & identify opportunities**
- Target the appropriate RFID/IoT technology for your specific case

Use a Methodological approach

To solve problems & identify opportunities

- Set of **practices, procedures & rules** used in the inquiry/investigation of RFID potential
- With the **goal to understand** different situations & **acquiring new knowledge**
- Based on gathering observable, empirical & **measurable evidence** in your warehouse!
- It is not a formula!

Pics: [Pixabay](#)

Use a Methodological approach

To solve problems & identify opportunities

Do not envision an RFID project as a technological project!

Define:

- Goals for process improvement
- Customer requirements
- Project scope
- The problem/opportunity

Measure:

- Identify appropriate performance measures
- Collect data
- Evaluate current process performance

Analyze:

- Develop and test theories related to root causes of problems
- Identify cause-and-effect relationships

Improve:

- Develop, evaluate, and implement solutions to reduce gap between desired process performance and current performance

Control:

- Monitor process to sustain improved performance
- Ensure that problems do not resurface

Methodology

Defining the problem – the classics errors!

1. Our problem is that we want to improve

2. Our problem is that we want to implement RFID for

3. Our problem is that we want to

It's not about WHAT you want to do, but WHY you want to do it

"So.... How can we blame procurement?"

Methodology

Defining the problem – the classics errors!

Defining the problem/opportunities
& envisioning solutions shouldn't be
an endless process...

It has to be managed as a project!
By projects managers! For/with
operations managers!

"They've supposedly been close to a breakthrough
on inventory optimization for 5 years now."

Use a Methodological approach

To solve problems & identify opportunities

Define:

- Goals for process improvement
- Customer requirements
- Project scope
- The problem/opportunity

Measure:

- Identify appropriate performance measures
- Collect data
- Evaluate current process performance

Analyze:

- Develop and test theories related to root causes of problems
- Identify cause-and-effect relationships

Improve:

- Develop, evaluate, and implement solutions to reduce gap between desired process performance and current performance

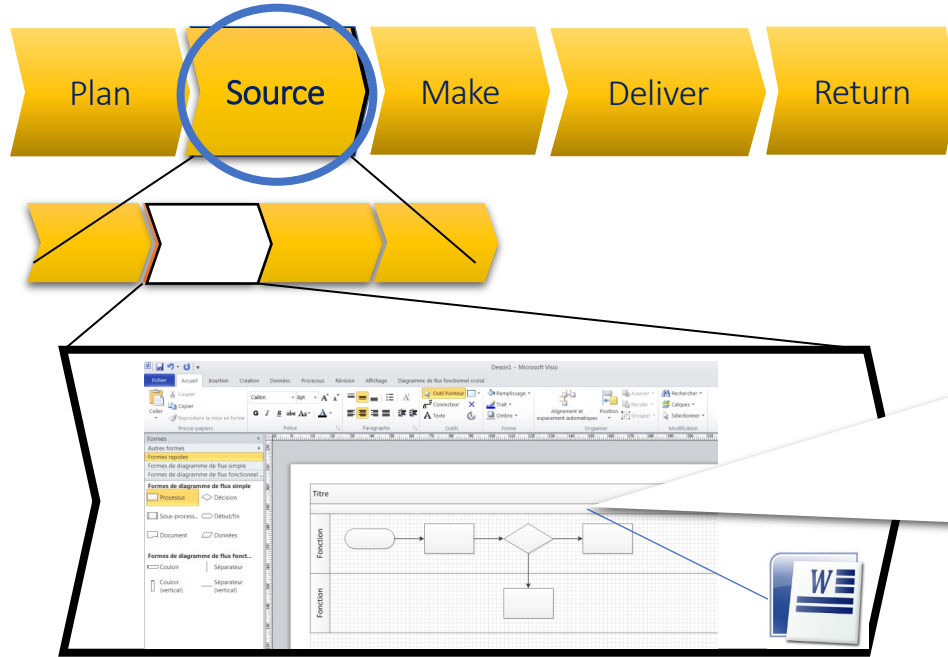

Control:

- Monitor process to sustain improved performance
- Ensure that problems do not resurface

Methodology

Data gathering : a process perspective

- Use Process Modeling Methods & standards
- Concentrate on core processes (Receive, put away, pick, ...)
- Use KPIs to assess/measure your processes

Use a Methodological approach

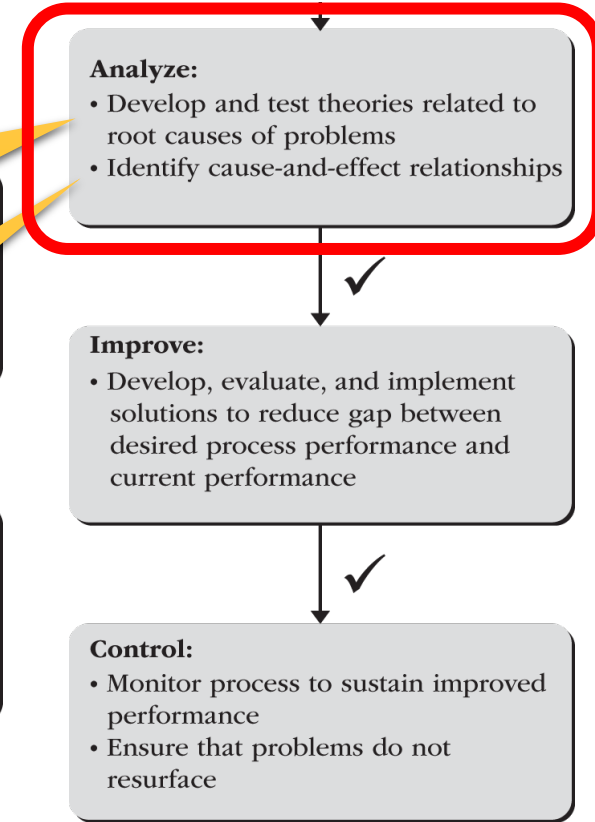

Data gathering and analysis

Operations Management perspective

- Employee surveys
- Plant tour/audits
- Value chain
- Business Processes mapping
- Issues Trees - Root cause analysis
- ABC/Pareto analysis
- Org. Charts

Technical perspective

- Site Survey
- IT Infrastructure/system maps
- IT portfolio assessment
- Wireless Network evaluation

MAY 17 - 19, 2022

An example

I have a problem !!!!

son Retamal de Pixabay

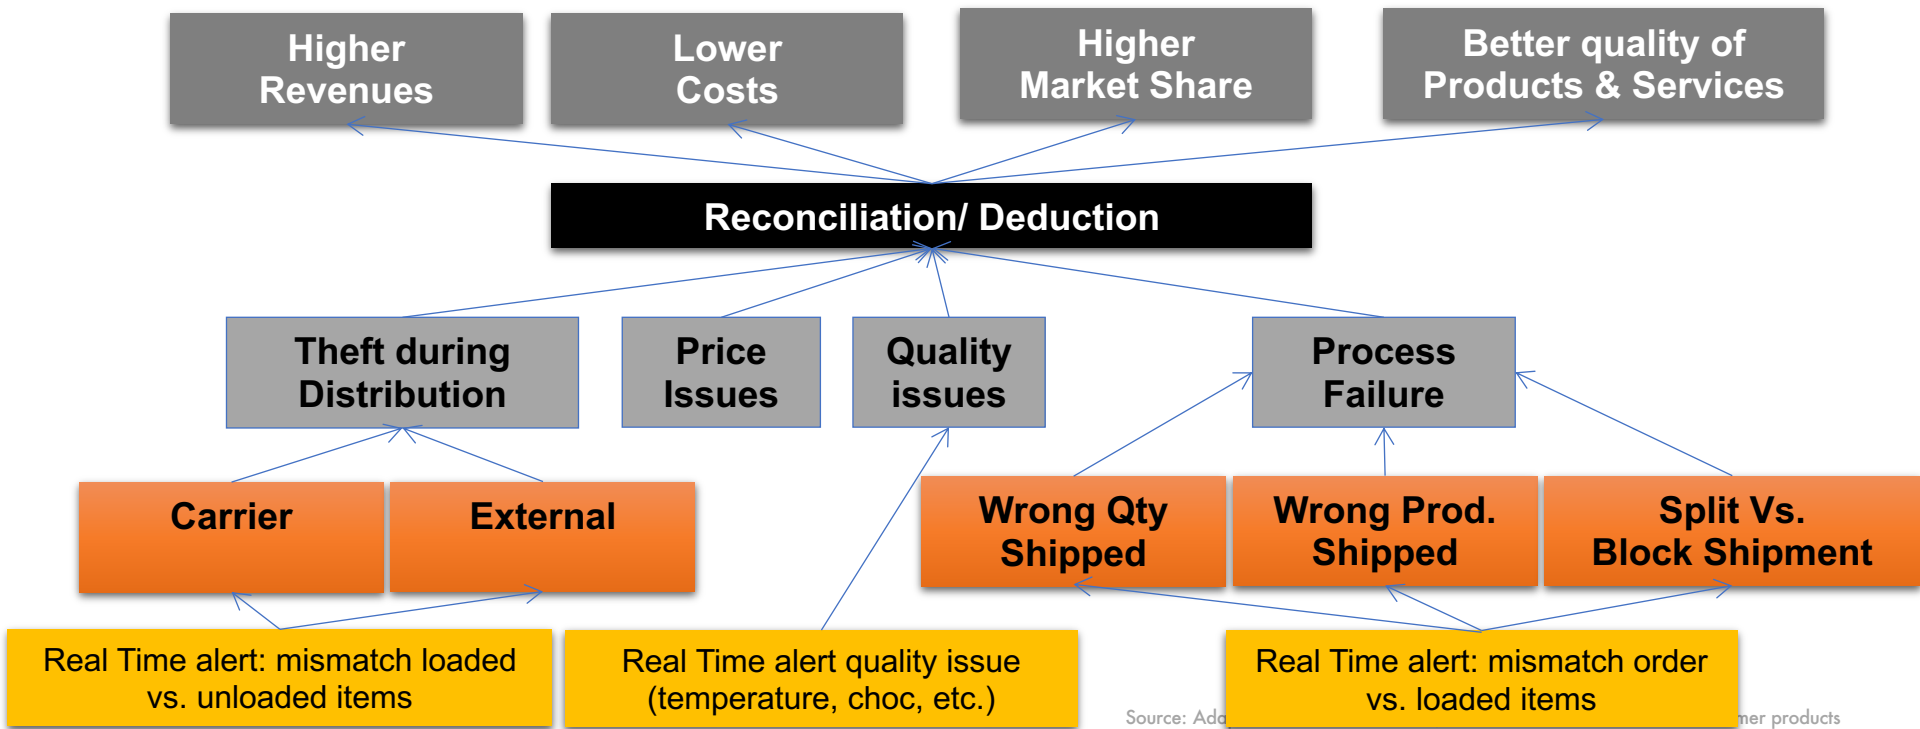

"We often face some problems when it's time to make the reconciliation between the products shipped by the supplier and the ones received at the warehouse. .."

age par Free-Photos de Pixabay

Methodology & Tools

Analyzing the problem

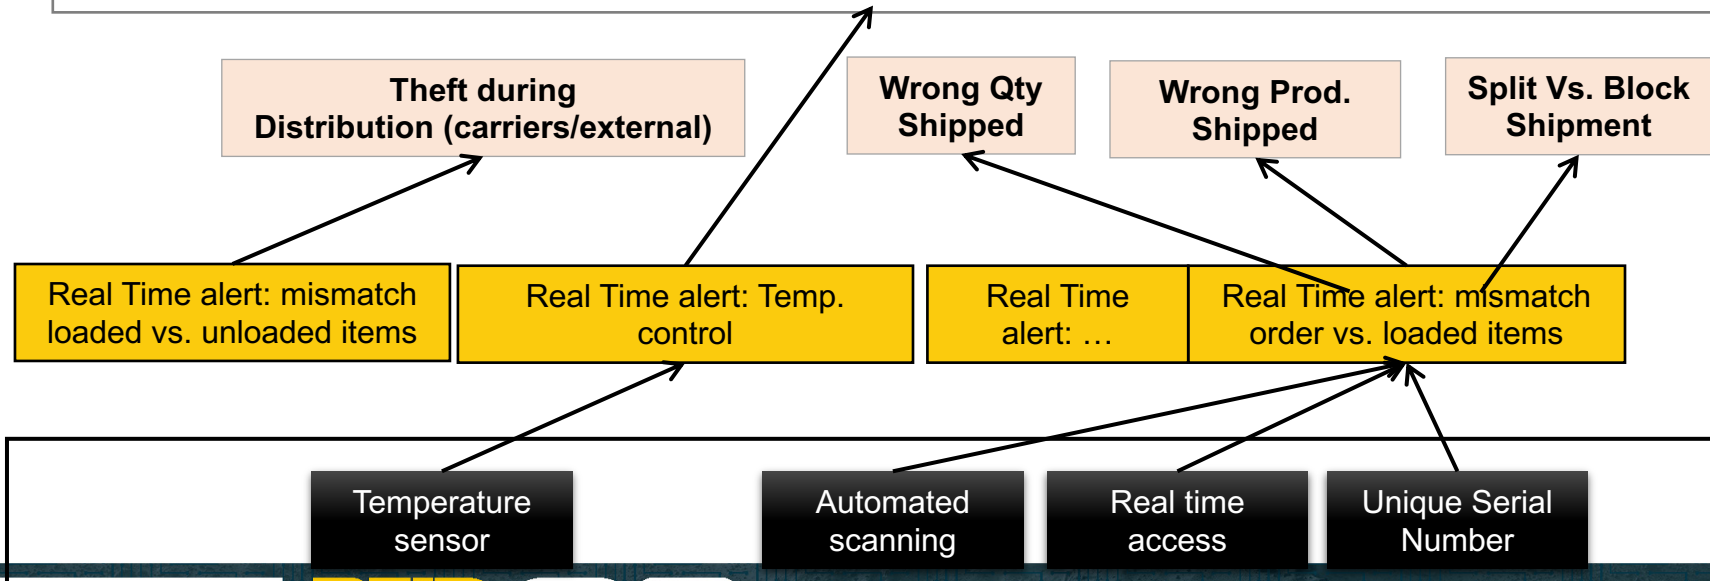

Source: Ada

mer products

Methodology & Tools

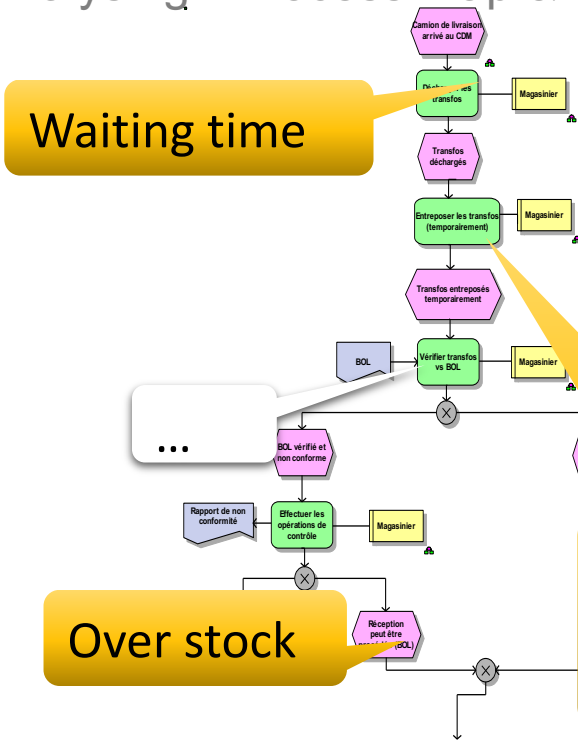

Analyzing the problem

As we define & analyse the problems, we already anticipate the requirements for selecting the technology....

Methodology

Analysing -Process Map & value analysis (and waste)

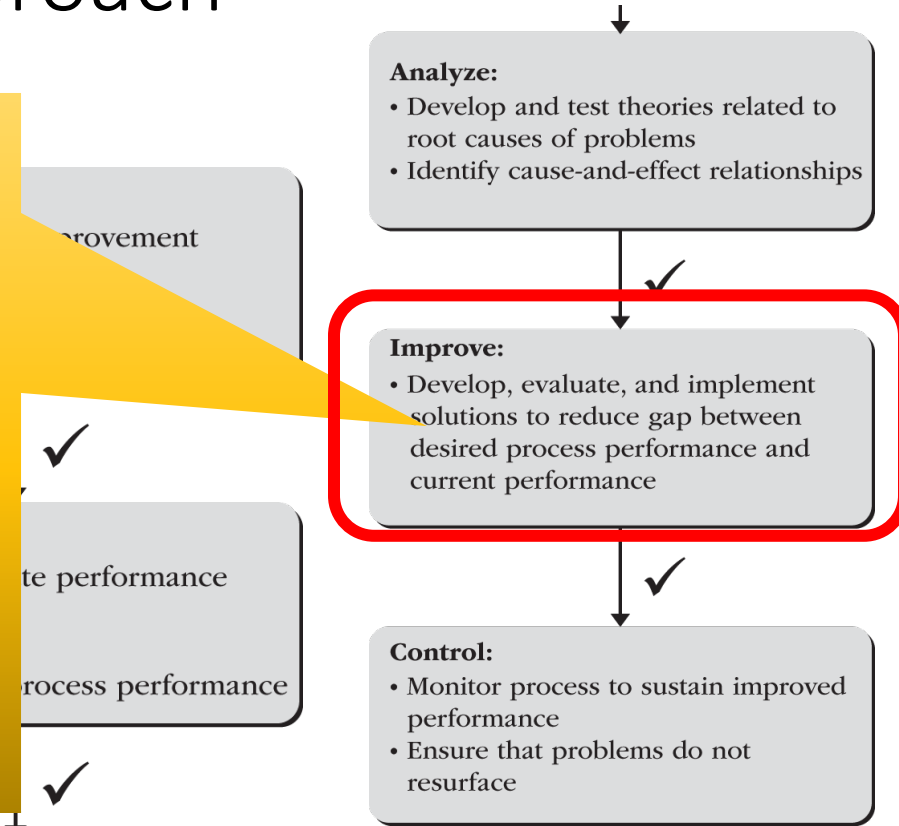

| | Reduce the amount of late orders delivery | | | | | | | | |
|--------------------------|---|----|----|------------------------------------|----|----|-----------------|----|----|
| | Added value | | | Non added value (but necessary) | | | Non added value | | |
| | A1 | A2 | An | A1 | A2 | An | A1 | A2 | An |
| Monday 17 Jan. (10h-12h) | | | | | | | | | |
| Monday 25 Jan. (10h-12h) | | | | | | | | | |
| Monday 25 Jan. (14h-16h) | | | | | | | | | |
| | | | | | | | | | |

Use a Methodological approach

Select- solution

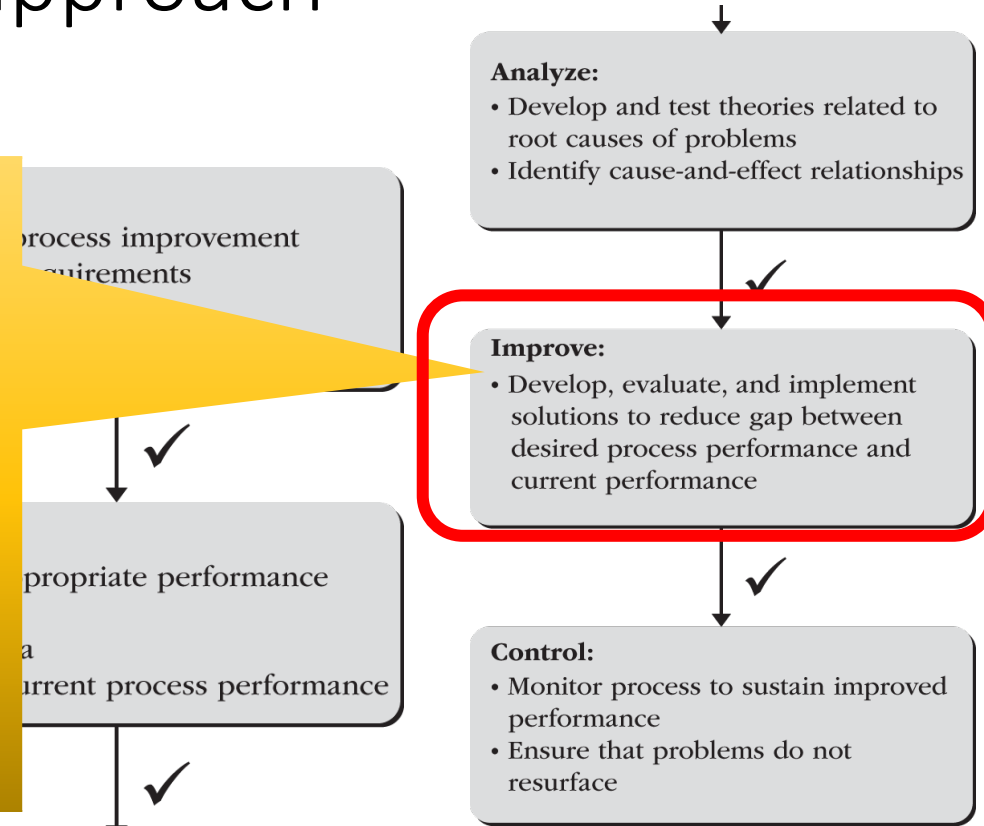

- Market browsing/ Identification of existing solutions/vendors
- **Conference/exhibition (RFID Journal Live 😊)**
- **RFID Journal awards**
- Benchmarking analysis
- RFI / RFQ/RFP/...
- **Computer simulation**
- **Laboratory experiments/ Pilot**
- ...

Use a Methodological approach

Managing the project - implementing

- IT Project management guidelines & methodologies (e.g. PMBOK, APMBOK)
- Agile project management methodologies
- ERP/IOS implementation methodologies (BPR)
- Laboratory experiments
- Pilot project

Use a Methodological approach

Cost Impacts and pay off Analysis

1. ABC: Activity-Based Costing
2. BSC: Balanced ScoreCard
3. SCOR: Supply Chain Operation Reference Model
4. GSCF framework
5. ASLOG audit
6. EFQM: Excellence Model
7.

Analyze:

- Develop and test theories related to root causes of problems
- Identify cause-and-effect relationships

Improve:

- Develop, evaluate, and implement solutions to reduce gap between desired process performance and current performance

Control:

- Monitor process to sustain improved performance
- Ensure that problems do not resurface

Objective of the presentation

- Define the RFID/IoT strategy & select the right project
- Use a Methodological approach to solve problems & identify opportunities
- **Target the appropriate RFID/IoT technology for your specific case**

Select the appropriate RFID-IoT tech. for your specific case?

MAY 17 - 19, 2022

IoT Infrastructure

Sources: Bendavid Y. Laboratoire IoT <https://labiot.ugam.ca/>

An RFID/IoT solution is not just about tags and readers

IoT Infrastructure

An RFID/IoT solution is not just about tags and readers

Applications/Analysis/transactions/Visualisation

(Local application, Cloud/fog/edge based application, Mobile apps)

Information hosting/access/sharing

(Local server, Cloud based server, Fog based, Edge based)

Data Center

(Communication)

- Many scenarios can be envisioned
- impact on the solution's design
- trade-off analysis

devices

Phones, Tablets, Mobile computers, liFi tracker, Etc.

Wearables

Smart watch, fitness tracker, BLE badge

None

The object as the identifier

Select the appropriate RFID tech. for your specific case?

The technology will support your case – **Requirement management**

- Passive RFID (LF, HF, UHF)
- Semi Passive RFID (BAP)
- Active RFID (proprietary 433Mhz, UWB, RFID/IR, RFID/WIFI)
- Hybrid solutions
- BLE solutions (RSSI, AoA)
- LiFi
- Robots
- Drones
- ...

Select the appropriate RFID tech.

Some questions for the design of the “to Be” business & technological Scenarios

- **Which application / business process(es)?**
 - **Which** products? **What** level of tagging?
 - **What** functionalities are required for the tags/readers?
 - **What** is the level of process automation? **Automated?** **Semi-automated?**
 - **Where** will items need to be identified?
 - **How Many** products (tags) at a time?
 - **What** is the speed (reading, commissioning tags, etc.)?
 - **What** is the reading/writing distance?
 - **What** is the required precision and accuracy?
 - **What** is the required latency? Do you need real time ?
 - **What** is the required level of Security ?
 - **With** who to share the info? **Why?**
 - etc

Select the appropriate RFID tech.

Some questions you should ask

- **Business requirements**
- **Technological requirements**
- **Project management constraints**

Select the appropriate RFID tech.
